

Requirements and design

We gathered requirements for a study planner from three fictional students and ranked them with MoSCoW. The design uses a weekly view and a task list.

Implementation

The planner is a small web app with a task store and a weekly view. Tasks can be added, edited and marked as done.

Testing and evaluation

We ran unit tests and a usability session with fictional users. The results are in the table below; we did not write them out in the text.

Test	Result
Unit tests	48 passed, 2 failed
Statement coverage	86%
Usability sessions	5 users
Tasks completed	4 of 5 users
Median task time	3 min 10 s

Reflection

Next time we would test earlier, and with more users.
