

Study Buddy: a revision timetable planner

Cover

Jordan Pike, student number S0000102, j.pike@example.com.

Requirements and design

The app should let students add modules and exam dates and get a timetable. I used a single-page application because it is modern.

Implementation

I built the front end in React. Adding modules and exam dates works. The timetable generator sometimes schedules sessions after the exam date and I did not have time to fix this. Data is stored in the browser.

Testing and evaluation

I tested the app by clicking through it and it mostly worked.

Reflection

I learned React. Next time I would start earlier.
